

SHELL SCRIPTING -SET-2
Submission: Jan 11th / Jan 13th

Write a shell script:

1. To print month name if month number is given.
2. To find the factorial of a number using recursive function call.
3. To create your own customized shell. After executing the script you will be ending up with a prompt with your name and you will be able to execute all scripts (questions given for lab assignmnet 1 and 2)with short commands.
4. To implement a calculator with minimum functionalities(add , sub, mul, div), using function & case utility . The script should be menu driven.
5. To read two words and a file name from command line and replace the occurrences of first word with the second word.
6. To implement following using select construct:
 - a. create a file (using touch)
 - b. rename a file
 - c. delete a file
 - d. copy fileThe script should be menu driven.
